**Mid-Atlantic Research Set-Aside by Species and Year (2009-2014)**

Below are species-specific tables provided by Greater Atlantic Regional Fisheries Office staff detailing Mid-Atlantic RSA numbers from 2009-2014 that outlines what was set aside, awarded, and harvested. As a note, Mackerel is not listed because it was never awarded due to lack of interest/value. Tilefish is not listed because the Council always set the RSA at 0. Butterfish never had value as an RSA species until the butterfish cap was established, at which point there was potential value in that it would allow the harvest of squid RSA. Note: All values are listed in pounds unless otherwise noticed.
