## Meeting Objectives and Considerations for 2023 Specs

- Review meeting objectives

## 2023 Scup Recreational Measures

- Review recent recreational fishery performance
- Review RDM and RFDM estimates of 2023 harvest under 2022 measures
- Recommend estimate of 2023 harvest under 2022 measures with

9:10-11:00 confidence interval (CI)

- Determine percent change in harvest required
- Recommend 2023 federal waters recreational limits, as well as considerations for adjustments to state measures, to achieve the percent change in harvest required
$11: 00-11: 10$
$11: 10-12: 00$
- Same as above for scup
- Recommend use of coastwide measures or conservation equivalency
- Recommend 2023 precautionary default and non-preferred coastwide measures under conservation equivalency
12:00-1:00 Lunch
1:00-2:00 2023 Black Sea Bass Recreational Measures Continued
2:00-3:50 2023 Summer Flounder Recreational Measures
- Same as above for black sea bass

3:50-4:00 Next Steps and Adjourn

Column 1
2023 RHL vs expected harvest under 2022 measures

RHL greater than upper bound of expected harvest CI (RHL underage expected)

RHL within expected harvest CI (harvest expected to be close to RHL)

RHL less than lower bound of expected harvest CI
(RHL overage expected)

Column 2
Biomass compared to target level (SSB/SSB ${ }_{\text {MSY }}$ )

## Column 3

Change in Harvest

Liberalization \% = difference between harvest estimate and 2023 RHL, not to exceed 40\%

Liberalization \% = difference between harvest estimate and 2023 RHL, not to exceed 20\%
at least target, but no higher than $150 \%$ of target

## Low <br> Liberalization: $\mathbf{1 0 \%}$

below target stock size

## Very high

greater than $150 \%$ of target

## High

at least target, but no higher than $150 \%$ of target

Low
below target stock size

## Very high

greater than $150 \%$ of target
High
at least target, but no higher than $150 \%$ of target below target stock size

Liberalization: 10\%

No liberalization or reduction: 0\%

Reduction: 10\%
Reduction: 10\%

Low Reduction \% = difference between harvest
Reduction \% = difference between harvest estimate and 2023 RHL, not to exceed 20\% estimate and 2023 RHL, not to exceed 40\%

## Meeting Outline and Objectives

- Review recent recreational fishery performance
- Review model results and recommend estimates of 2023 harvest under 2022 measures with confidence interval
- Determine percent change in harvest required under the Percent Change Approach
- Recommend 2023 recreational measures
- Federal measures for Scup
- Coastwide measures or conservation equivalency for summer flounder and black sea bass
- Precautionary default and non-preferred coastwide measures under conservation equivalency for summer flounder and black sea bass

MID-ATLANTIC|

## 2023 Scup Recreational Measures Monitoring Committee Meeting

November 15, 2022

## 2022 Federal Recreational Measures

Possession limit

- 50 scup

Size limit $\{0.10$ inches total length $\underset{\substack{\text { uopataed } \\ \text { in } 2022}}{\substack{1}}$ Season $\left\{\begin{array}{l}\bullet \text { January 1-December } 31\end{array}\right.$

2022 State Recreational Measures

| State | Min. Size (inches) | Possession Limit | Open Season |
| :---: | :---: | :---: | :---: |
| MA (private \& shore) | 10 | 30 fish; <br> 150 fish/vessel w/5+ anglers | April 13-Dec. 31 |
| MA (party/charter) | 10 | 30 fish 50 fish | April 13-April 30; July 1-Dec. 31 May 1-June 30 |
| RI (private \& shore) | 10 |  |  |
| RI shore program (7 designated shore sites) | 9 | 30 fish | Jan. 1-Dec. 31 |
| RI (party/charter) | 10 | 30 fish 50 fish | Jan. 1-Aug. 31; <br> Nov. 1-Dec. 31 <br> Sept. 1-Oct. 31 |
| CT (private \& shore) | 10 |  |  |
| CT shore program <br> (45 designed shore sites) | 9 | 30 fish | Jan. 1-Dec. 31 |
| CT (party/charter) | 10 | 30 fish | Jan. 1-Aug. 31; <br> Nov. 1-Dec. 31 |
| NY (private \& shore) | 10 | 50 fish 30 fish | $\begin{aligned} & \text { Sept. 1-Oct. } 31 \\ & \text { Jan. 1-Dec. } 31 \end{aligned}$ |
| NY (party/charter) | 10 | 30 fish | Jan. 1-Aug. 31; <br> Nov. 1-Dec. 31 |
|  |  | 50 fish | Sept. 1- Oct. 31 |
| NJ | 10 | 50 fish | Jan. 1- Dec. 31 |
| DE | 9 | 50 fish | Jan. 1- Dec. 31 |
| MD | 9 | 50 fish | Jan. 1- Dec. 31 |
| VA | 9 | 30 fish | Jan. 1- Dec. 31 |
| NC (North of Cape Hatteras) | 9 | 50 fish | Jan. 1- Dec. 31 |

## Recreational Catch and Landing Trends

 With 2022 Waves 1-4

## Harvest in Federal and State Waters

## Harvest By Mode

$\square$ Party/Charter $\quad$ Private/Rental boat $\quad$ Shore

## Harvest By State

| State | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ <br> $(\mathbf{w} \mathbf{- 4 )}$ |

| VA | 0 | 0 | 229 | 0 | 157,455 | 0 |
| NC | 508 | 420 | 2,637 | 1,346 | 2,831 | 1,302 |
| Total | $13,526,579$ | $12,977,417$ | $14,116,226$ | $12,913,808$ | $16,621,640$ | $13,717,857$ |

## 2023 Harvest Under 2022 Measures

- First step under the Percent Change Approach
- RDM estimates slightly higher than RFDM estimates
- 2023 RHL is below 5 of the 6 CIs shown below
- Harvest very likely to exceed 2023 RHL if measures left unchanged.

| Model | Model <br> estimate for <br> $\mathbf{2 0 2 3}$ harvest | $\mathbf{9 5 \% ~ C I}$ | $\mathbf{9 0 \%} \mathbf{C I}$ | $\mathbf{8 0 \%}$ CI | $\mathbf{2 0 2 3}$ <br> RHL |
| :--- | :---: | :---: | :---: | :---: | :---: |
| RDM | 17.21 (median) | $10.75-26.68$ | $11.98-24.94$ | $13.56-22.68$ | 9.27 |
| RFDM* | 16.84 (median) | $8.21-31.38$ | $9.38-28.10$ | $10.73-25.68$ |  |
| *Cont |  |  |  |  |  |

* Converted to pounds based on average weight of harvest in 2021 from MRIP data

## Confidence Interval Around Expected 2023 Harvest

- Percent Change Approach does not specify methods for calculating CIs
- MC should provide advice to Counci//Board on appropriate CI for 2023
- Staff recommend additional discussion/evaluation on this issue in 2023 to inform a more consistent approach to use of CIs

# Confidence Interval Around Expected 2023 Harvest 

- For 2023, staff recommend use of $\mathbf{8 0 \%} \mathbf{C I}$
- Recommended by the Harvest Control Rule FMAT/PDT when considering MRIP data only
- Models should increase our confidence in ability to predict harvest
- Higher percentage CIs result in wider range of values: may not be appropriate for applying Percent Change Approach
- $90 \%$ or $95 \%$ more likely to contain "true" harvest value, but creates higher likelihood of ending up in an inappropriate PCA bin
- Staff recommend same percentage CI be used for all 3 species

## Resulting Percent Change for 2023

| Column 1 <br> 2023 RHL vs expected <br> harvest under 2022 <br> measures | Column 2 <br> Biomass compared to <br> target level (SSB/SSB | CSY |
| :---: | :---: | :---: |

- Based on model results from previous slide:
- Harvest target of $\mathbf{1 5 . 4 9} \mathbf{~ m i l ~ l b s}$. based on RDM estimate
- Harvest target of $\mathbf{1 5 . 1 6} \mathbf{~ m i l ~ l b s . ~ b a s e d ~ o n ~ R F D M ~ e s t i m a t e ~}$
- Harvest targets may be revised based on updated model runs

## Rec. Accountability Measures

1. If the stock is overfished, under a rebuilding plan, or stock status is unknown: Exact overage amount must be paid back as soon as possible. Payback may be evenly spread over 2 years if doing so allows for identical measures for the upcoming 2 years.
2. If biomass is above the threshold, but below the target, and the stock is not under a rebuilding plan:

- If only the ACL exceeded: Adjust bag/size/season, taking into account performance of the measures and conditions that precipitated the overage.
- If most recent F exceeds Fmsy: adjustment to the rec. ACT will be made as soon as possible as a payback that will be scaled based on stock biomass where payback = (overage amount) * (Bmsy-B)/1⁄2 Bmsy. Payback may be evenly spread over 2 years if doing so allows for identical measures for the upcoming 2 years. If $\mathrm{F} /$ Fmsy not available for most recent year of catch data, catch vs ABC comparison will be used.

3. If biomass is above the target: Adjustments to measures will be made, taking into account the performance of the measures and conditions that precipitated the overage.

## Rec. Accountability Measures

3. If biomass is above the target: Adjustments to measures will be made, taking into account the performance of the measures and conditions that precipitated the overage

| Year | Rec. <br> Harvest <br> (mil lbs.) | Rec. Dead <br> Discards <br> (mil Ibs.) | Total Dead Rec. <br> Catch (mil lbs.) | Rec. ACL <br> (mil Ibs.) | \% Over/ <br> Under <br> ACL |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2019 | 5.41 | 0.41 | 5.82 | 8.01 | $-27 \%$ |
| 2020 | 12.91 | 1.15 | 14.06 | 7.87 | $+79 \%$ |
| 2021 | 16.62 | 1.36 | 17.98 | 7.66 | $+135 \%$ |
| Average | $\mathbf{1 1 . 6 5}$ | $\mathbf{0 . 9 7}$ | $\mathbf{1 2 . 6 2}$ | $\mathbf{7 . 8 5}$ | $\mathbf{+ 6 1 \%}$ |

2019 data based on Old MRIP estimates (provided by GARFO)
2020 recreational estimates were developed using imputation methods
2020 and 2021 dead discards for 2020-2021 calculated using alternative methods.

## Rec. Accountability Measures continued

- AMs triggered for scup
- Scup biomass > target; therefore, regs require adjustments to measures
- Regulations do not specify how
- GARFO letter to the Council: Due to recent actions taken by Council/Commission, no additional action needed beyond changes required by Percent Change Approach
- 5 of 6 CIs shown on previous slide would require 10\% reduction, regardless of AMs
- $95 \%$ CI could result in $10 \%$ liberalization which may not be justifiable given triggering of AMs

## 2023 Harvest Target

- The MC is tasked with developing recommendations for rec. limits for federal waters
- May also consider adjustments needed to state measures; however, state measures developed separately through Commission process
- Federal and state measures should collectively achieve the 10\% reduction required by Percent Change Approach
- RDM median estimate of 17.21 million pounds results in a harvest target of $\mathbf{1 5 . 4 9}$ million pounds
- RFDM median estimate of 16.84 million pounds results in a harvest target of $\mathbf{1 5 . 1 6}$ million pounds

## Consideration for 2023 Measures

Minimum Size limit

- Increase implemented earlier this year
- Prior to this change federal recreational measures remained unchanged for many year
- Effectiveness of increase has not yet been evaluated
- Another increase to min. size would increase min. size to 11 inches
- Relatively large compared to 50\% maturity (~7 inches)
- Staff recommend avoiding further size limit increases in 2023

## Consideration for 2023 Measures continued

## Seasonal closures

- In federal and many states waters would require significant shortening of season or mid-year closure to achieve meaningful reduction in harvest
- Proportion of harvest by wave differs by state
- Seasonal closure in federal waters could disproportionately impact some states
- Seasonal closure applied at state or regional level may be more appropriate
Possession limit
- Majority of angler do not keep a full limit
- Federal and majority of states possession limit is 50 or 30 fish
- Several states have a "bonus wave" for the for-hire sector with a higher bag limit

## Additional RDM Analysis and Staff Rec. for 2023 Measures

| Set of measures analyzed | Est. harvest <br> under <br> analyzed set <br> of measures <br> (mil lbs.) | Percent <br> reduction <br> achieved | Est. harvest <br> under 2022 <br> measures <br> (mil lbs.) |
| :--- | :---: | :---: | :---: |
| $\mathbf{1 5}$ fish possession limit, status <br> quo size limits and seasons | 16.28 | $5.4 \%$ |  |
| 1-inch increase to size limit, <br> status quo possession limits and <br> seasons | 13.22 | $24 \%$ | 17.21 |

- Due to time constraints, additional model runs not performed
- Staff recommend either:

1. A possession limit of $<15$ fish that achieves full $10 \%$ reduction
2. Coastwide 15 fish possession limit with additional adjustments to state waters measures made through the Commission's process to achieve the $10 \%$ reduction

## Decision Points

- Recommend estimate of 2023 harvest under 2022 measures and associated CI
- Staff recommend use of RDM or RFDM and $80 \%$ CI
- Determine appropriate percent change in harvest required under the Percent Change Approach
- $10 \%$ based on staff recommendation
- Recommend federal water measures and considerations for state water measures
- Staff recommend either:

1. The MC evaluate a coastwide possession limit of less than 15 fish that achieved full $10 \%$ reduction
2. The MC recommend a coastwide 15 fish possession limit with additional adjustments to state waters measures made through the Commission's process to achieve the $10 \%$ reduction
